

Macro Video to showcase the Datavideo SE-500HD mixer/switcher and HDR-1 recorder

The **SE-500HD** was presented at NAB in Las Vegas in April this year and is the HD successor of the hugely successful analogue **SE-500** mixer.

With the market swing to HD, the SE-500HD is a compact 4 input HDMI switcher with two HDMI outputs and is designed to allow users to input any camcorder, GoPro, HDMI laptop or tablet and switch the various sources with a push of a button or use of a T-bar. Features include Luma key for graphic overlay, split screen for podcast interviews, and PIP for Powerpoint presentations. Microphones and other audio sources plug directly into the SE-500HD's on-board audio mixer, and are embedded into the HDMI output.

The compact size of the SE-500HD makes it the ideal solution for corporate training, education, podcasts, and House of Worship applications.

HDR-1 is a standalone H.264 USB recorder that is portable and easy to use. It records MP4 (H.264_AAC) format video files, which is ideal for archiving footage from a worship seminar, corporate meeting, school functions, or a live concert. One of the advantages of the HDR-1 over other similar recorders in the market is that it works independently of a PC.

Using the SE-500HD in conjunction with HDR-1 gives users an all-inclusive, cost effective package for switching and recording a video production.
